Passionate Software Intern with over 8 months of frontend experience is seeking to obtain an opportunity where I can utilize my skills and knowledge efficiently and pursue a gratifying career in web development

## EXPERIENCE

**Software Engineering Intern, IT Bangla Ltd**, Dhaka                                    Feb 2021– Sep 2021

- Developed and designed a dynamic responsive website using Spring Boot Thymeleaf
- Developed some Rest web services and CMS Project using Thymeleaf, Bootstrap, Oracle PL/SQL, HTML, CSS, JavaScript, and Git version control platform

## SKILLS

- **Expertise**: HTML5, CSS3, Bootstrap, Tailwind, JavaScript, ES6, React, Firebase
- **Comfortable**: Node, Express, MongoDB, C
- **Familiar**: Material UI, Oracle PL/SQL, MySQL, Python
- **Tools:** Git & GitHub, Chrome Dev Tools, Netlify, Vercel

## PROJECTS

1. **DeviceExpress -** An Online secondhand laptop selling & buying related website  **Live Site | Client Side | Server Side**

   **Technologies:** React, Tailwind CSS, Node, Express, MongoDB, Firebase, JWT, Stripe

   - Buyer, Seller, and Admin panels are Implemented, where the buyer can report, and purchase the product using Stripe, and the seller can manage their products
   - Another user role Admin can verify the seller's status unverified to verify and manage all buyer's and sellers' info
   - The seller can advertise their products to display on the home page and delete them anytime in their panel

2. **HealthPursue -** An online health service where user can give their opinions        **Live Site | Client Side | Server Side**

   **Technologies**: React, Tailwind CSS, Node, Express, MongoDB, Firebase**,** JWT

   - Authenticated users can add, edit, and delete their own opinions on various health services and can view all the comments they have made on any service from a specific route.
   - A User can add different types of health services and see the reviews of other users about various services
   - Firebase authentication is integrated with JWT, so only authenticated users can perform the above actions

3. **TeleCourse** – A course platform where various types of courses are available        **Live Site | Client Side | Server Side**

   **Technologies**: React, Tailwind CSS, Node, Express, Firebase

   - Authenticated users can access the course checkout route and can download the course outline in PDF format
   - Valid Users can dynamically search by course categories and see details info about available courses
   - Implemented Navbar dark mode toggle, active route, google login using firebase, and update user information
